**SITE CHARACTERIZATION OF THE 903 DRUM STORAGE AREA (IHSS 112), 903 LIP AREA (IHSS 155), AND THE AMERICIUM ZONE - MTV-021-97**

This letter requests Air Quality support and concurrence for RMRS to perform field activities in support of the Site Characterization of the 903 Drum Storage Area (IHSS 112), 903 Lip Area (IHSS 155), and the Americium Zone. Field activities are scheduled to begin in late January to February through August 1998. Intrusive field activities will consist of surface and subsurface soil sampling for volatile organics (VOCs) and radionuclides and will be performed in accordance with appropriate ER and RFETS policies, procedures and DOE Orders. Subsurface soil sampling will be performed using a geoprobe drilling technology which minimizes waste and field activities. Sampling will be conducted in accordance with FO.I, Air Monitoring and Particulate Control, the ALARA Job Review, and the job-specific Radiation Work Permit. This project is similar to previous site characterization projects which did not require air quality permits. Please provide any recommendations for air quality controls for the proposed sampling program by January 6, 1998.

If you have any questions or require additional information, please call me at extension 6540, digital pager 4012, or Mark Wood at extension 6689, digital pager 5904. Thank you for your support of the ER Projects Group.
